

# Neo-CRM

Replace complex CRM software with a conversational system that tells you exactly what to do next.

# Current painpoints

Teams using systems like Salesforce or HubSpot often experience:

- Heavy manual data entry
- Time spent updating instead of selling
- Complex navigation (menus, fields, pipelines)

The background is a solid orange color. In the top-left corner, there are three vertical bars of varying heights, each composed of three overlapping circles. In the bottom-right corner, there are four vertical bars of varying heights, each composed of three overlapping circles.

**“Our sales team is spending  
more time managing the  
CRM than closing deals.”**

Reps avoid logging activities

Managers don't trust CRM data

Pipeline is inaccurate

Shadow systems (notes, spreadsheets, WhatsApp) emerge

**“If users won’t use the  
system, the system is  
broken—not the users.”**

# Shift from system-of-record → system-of-action

Traditional CRMs are **systems of record** (store data).

We want CRM as a **system of execution**.

**“We can’t win by building  
another better CRM—we need  
to redefine what a CRM is.”**

**We need to to reduce  
cognitive load, not just  
time**

# **“The best tools disappear—they don’t feel like tools.”**

Too many fields

Too many views

Too many decisions

One interface (chat)

One output (next action)

Minimal thinking required

- Increase of revenue of EUR 50.000,- per quarter in subscriptions
- New features result in 20k new registered users this year
- Additional investments EUR 200k
- NPS score from 7 to a 9
